A unit has various types of providers:

- Internet
- Security
- …

A negotiator represent multiple clients and their units to negotiate with a provider

Dynamic Data Tables

Thread

Created as the result of sales and marketing. A new client can be created with the thread, keeping:

- The sales person/ account manager
- The introducing client

for marketing, brokerage and commission

ontract

Created from a thread, keeping:

- Client info
- Provider info
- Units involved
- Parameters (percentage) of the profit sharing model
- Bills, profits and other results covered in this contract
- …

Bill

Master data of a bill, plus:

- The parameters applied on the bill
- The profit from negotiation
- The A/P to the service
- …

Negotiation

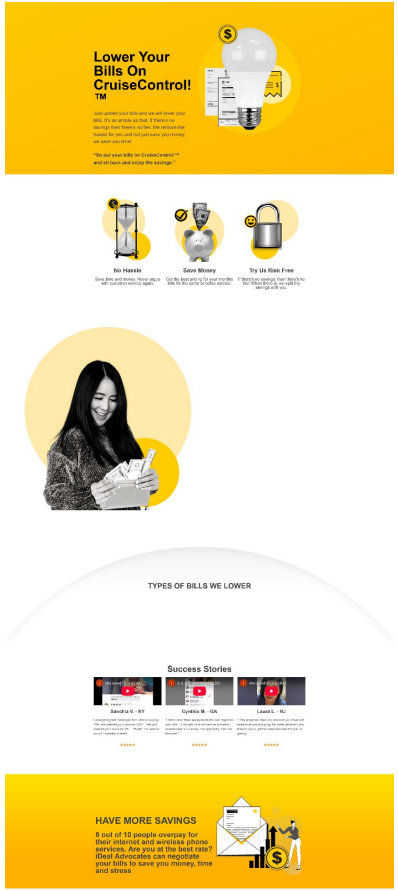
Keeping the record of a negotiation

- The provider, the clients and the units involved
- The contracts and bills that will apply
- The process and the notes of the negotiation
- …

A thread/contract is for an individual client and his or her units. The negotiation advantage comes from other similar clients.

A negotiation with a provider. Accumulation of clients, units, contracts will further strengthen the negotiation advantage.

Pages & Business Flow: Sales



Page: **New Thread**

Navigated here from the landing page.
